ESOS | Solar | LED | New Partnerships

## News

### Hawleys Launch Monthly Newsletter

Keen to try new ways to update everyone on changes in our business and the energy efficiency industry, Our Hawley Energy Group have launched a new monthly newsletter.

### Hawley Building Systems launches own branded LED range

The Hawley Energy management team have supplied & installed over 30,000 luminaires and during that time we've seen the best and worst of the LED marketplace. Putting all that experience to good use, HBS team are excited to confirm that they are developing their own range of products. [hawleyenergy.group/companies/building-systems/](http://hawleyenergy.group/companies/building-systems/)

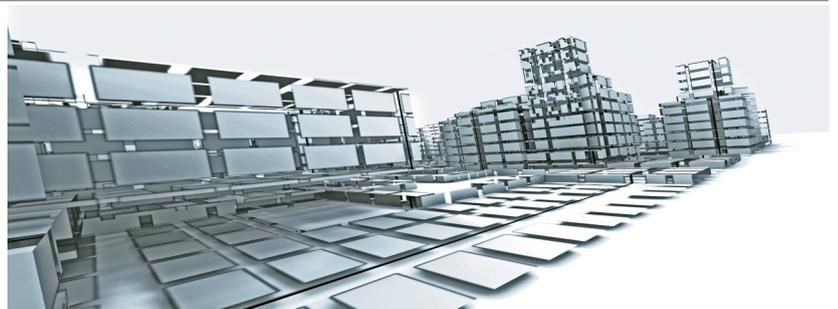

### ESOS Update

Our ESOS Lead Assessors are currently being updated by the EA & the EMA to make sure that our customers get the best from their ESOS reporting, minimising costs but maximising ROI.

### Hawley Building Services and Team Dynamics Partnership

HBS is really excited to announce its Technical Partnership with the Team Dynamics Racing Team.

TD run cars in the UK's British Touring Car Championship and have teamed up with HBS to improve energy efficiency across their entire operations.

## ESOS is here again, but are you ready?

It shouldn't have come as a surprise but it's amazing to hear how many companies haven't heard of the Energy Saving Opportunities Scheme, what's more surprising is how often it is used as a means of misleading those that must comply.

ESOS applies to a company if it employs more than 250 people or has an annual turnover in excess of 50 million euro and an annual balance sheet in excess of 43 million euro. Although it applies primarily to larger companies some trusts, partnerships and not-for-profit organisations that are involved in trade.

### Can you afford not to comply?

With a £50,000 fine and being named and shamed by the environment agency do you want to seriously damage your company's reputation? We think not and we are here to help.

Over the last few months, the feedback we have received when talking to customers about ESOS was that it has been used as a means of selling technology and the costs to secure compliance varied massively.

We've worked hard to develop a simple framework that means when it comes to ESOS securing compliance should be a straight forward process that requires no expensive monitoring systems or costly national pre-audit surveys, plus our approach ensures businesses can get the most appropriate service they need.

your energy saving experts

## Welcome to Hawleys

**Hawley Energy Group** provide a range of specialist advisory services, guiding customers through the complex and every changing energy efficiency industry.

**Building Services** provide Mechanical & Electrical Building Services Installation Services.

### HBS LED Installation Engineers

**Building Systems** carries an extensive range of lighting & electrical products in stock and ensures our installation teams have access to any equipment they might need.

**Enerlyse** Can install monitoring & metering equipment and provide an energy portal to view in real time your energy usage.

### Get in Touch:

Hawley Energy Group

## New Website

Hawley Energy Group have been quietly developing our new website and can now confirm that it is live.

Partnering with LightwaveRF & Nest, we're developing a range a of complimenting solutions & services that will launch over the coming weeks & months.

## Solar Installation

**As part of our work with Team Dynamics Racing, we've focused in on a Solar PV installation at their head office as the first major project which marks the launch of the Technical Partnership.**

It would be fair to say that the solar industry has seen its fair share of ups & downs over the past few years but whilst Feed-In Tariffs may well be coming to and end, this is not the end of the Solar industry.

On the contrary with MIP (minimum import price) for PV panels being abolished the equipment costs have drop significantly making Solar a much more attractive way to reduce energy costs, depending on your usage profile and attitude to payback periods, we have reached a point where we think Solar is a viable solution for high energy users.

Please **contact our sales team** if you would like to talk to us about solar any of our services via [sales@hawleyenergy.group](mailto:sales@hawleyenergy.group)

## New Starter

**We are really excited to confirm that Steve Bingham has joined us as Group Sales Manager.**

He brings with him a wealth of experience in the energy sector having worked for Solar Century, Kingspan and most recently the BRE (Building Research Establishment) and is here to take Hawley Energy Group to the next level of development.

## Voltage Optimisation

Over the next 12 months, VOICE (Voltage Optimisation Industry Council for Excellence) will introduce a series of standards, codes of conduct & installation guidelines for VO, helping a struggling industry fix the damage it has done over the last decade.
